

## The Midwifery Model of Care

The Midwifery Model of Care is based on the fact that pregnancy and birth are normal life processes.

The Midwifery Model of Care includes:

◆  
monitoring the physical, psychological, and social well being of the mother throughout the childbearing cycle;

◆  
providing the mother with individualized education, counseling, and prenatal care, continuous hands-on assistance during labor and delivery, and postpartum support;

◆  
minimizing technological interventions; and

◆  
identifying and referring women who require obstetrical attention.

◆  
The application of this woman-centered model of care has been proven to reduce the incidence of birth injury, trauma, and cesarean section.
